PUMP		
Liquid Handled	Type of liquid	Clean water
	Temperature [°C]	max. +40
Maximum working pressure	[MPa]	1
Maximum available negative suction head	[m]	-6
Construction	Impeller	Closed centrifugal type (multiple stages)
	Shaft seal type	Double mechanical seal
	Bearing	Sealed ball bearing
Pipe Connection	Suction	G 1¼ UNI ISO 228
	Discharge	G 1¼ UNI ISO 228
Material	Casing	EN 1.4301 (AISI 304)
	Casing cover	EN 1.4301 (AISI 304)
	Impeller	PPE+PS Glass fibre reinforced
	Diffuser	PPE+PS Glass fibre reinforced
	Shaft	EN 1.4057 (AISI 431)
	Shaft seal	Pump side: Carbon/Ceramic/NBR Motor side: Carbon/Ceramic/NBR
	Lubricating oil	White mineral oil: Esso Marcol 172 (90cc)
Applicable standard of test		ISO 9906:2012 – Grade 3B

MOTOR		
Type	Submersible dry type	
	Single Phase*	Three Phase
No. of Poles	2	
Rotation speed [min <sup>-1</sup> ]	2800	
Insulation Class	Class F	
Protection degree (CEI EN 60034-5)	IP 68	
Power rating	[kW]	0.6 ÷ 1.1
	[HP]	0.8 ÷ 1.5
Frequency [Hz]	50	
Voltage [V]	230 ±10%	230/400 ±10%
Capacitor	Built in	-
Over load protection	Built in	Provided by the user
Upper bearing bracket	Aluminium	
Lower bearing bracket	Brass	
Motor frame	AISI 304	
material	H07RN-F	
Power cable size	3G1 (40/08, 40/10, 40/12, 40/15)	4G1
	3G1.5 (80/12, 80/15)	
length [m]	5	
Type of cable entry	Cable Gland

TYPE KEY

PERFORMANCE CURVE SPECIFICATIONS

The specifications below qualify the curves shown on the following pages.

Tolerances according to ISO 9906:2012 – Grade 3B

The curves refer to effective speed of asynchronous motors at 50 Hz, 2 poles.

Measurements were carried out with clean water at 20°C of temperature and with a kinematic viscosity of  $\nu = 1 \text{ mm}^2/\text{s}$  (1 cSt)

The NPSH curve is an average curve obtained in the same conditions of performance curves.

The continuous curves indicate the recommended working range. The dotted curve is only a guide.

In order to avoid the risk of over-heating, the pumps should not be used at a flow rate below 10% of best efficiency point.

Symbols explanation:

- Q = volume flow rate
- H = total head
- $P_2$  = pump power input (shaft power)
- $\eta$  = pump efficiency
- NPSH = net positive suction head required by the pump
- MEI = minimum efficiency index

The minimum efficiency index (MEI) is a measure of the quality of a pump size in respect to its mean efficiency. The minimum efficiency index is based on the hydraulic efficiency and on the head at the best efficiency point.

The benchmark for most efficient water pumps is  $MEI \geq 0,70$ .

Information on benchmark efficiency is available at: [www.ebara.eu](http://www.ebara.eu)

The efficiency of a pump with trimmed impeller is usually lower than that of a pump with the full impeller diameter. The trimming of the impeller will adapt the pump to a fixed duty point, leading to reduced energy consumption. The minimum efficiency index (MEI) is based on the full impeller diameter.

The operation of these water pumps with variable duty points may be more efficient and economic when controlled, for example, by the use of a variable speed drive that matches the pump duty to the system.

**MULTIGO 40/08 (0.60 kW) (IN-LINE) MEI > 0.60 - Impeller diameter = 104**  
**MULTIGO 40/10 (0.75 kW) (IN-LINE) MEI > 0.60 - Impeller diameter = 104**  
**MULTIGO 40/12 (0.90 kW) (IN-LINE) MEI > 0.60 - Impeller diameter = 104**  
**MULTIGO 40/15 (1.10 kW) (IN-LINE) MEI > 0.60 - Impeller diameter = 104**

Rotation speed  $\approx 2800 \text{ min}^{-1}$   
 Test fluid: clean water at 20°C  
 Test standard: ISO 9906:2012 – Grade 3B

MULTIGO 80/12 (0.9 kW) (IN-LINE) MEI > 0.70 - Impeller diameter = 102  
 MULTIGO 80/15 (1.1 kW) (IN-LINE) MEI > 0.70 - Impeller diameter = 102  
 MULTIGO 80/20 (1.5 kW) - Impeller diameter = 102

Rotation speed ≈ 2800 min<sup>-1</sup>  
 Test fluid: clean water at 20°C  
 Test standard: ISO 9906:2012 – Grade 3B
